My current aim for this portfolio is to present a professional and organized site where companies and/or recruiters can view this site as easily and as quickly as possible. My projects are placed at the top of the page below my tagline and header since I believe projects are the first thing a potential employer would want to see when looking at portfolio.
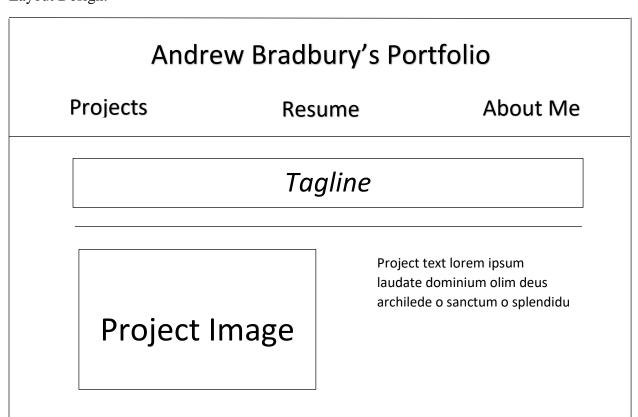

In terms of the color palette of the page, I think it could be possible to switch it to something a bit less drab somewhere down the line, but the drab colors could (hopefully) make colors in project screenshots stand out from the rest of the page. If I could find a color palette that can breathe life into the page but not distract viewers from what they should be looking at, I'd be more than happy to change it.

For now, there are placeholder images and descriptions, but I would eventually like to fill those spaces in with game projects that I have done in other classes or my own personal projects. At the moment the project titles are clickable, but they only lead back to the current page. Perhaps a future implementation might go to another page where I can have an embedded demo video or a gallery of images for each project.

Links for the fonts that I am using:

- Lexend Regular 400 (for navigation buttons, description text, and content information) - https://fonts.google.com/specimen/Lexend?preview.text_type=custom
- Merriweather Regular 400 (for headers, title text, and tagline) - https://fonts.google.com/specimen/Merriweather?preview.text_type=custom

Layout Design:
